FACTORY CERTIFIED MACHINE REBUILD PROGRAM

Your business depends on having the right equipment for the job, as well as making sure it is operating properly. The Factory Certified Machine Rebuild Program extends the life of the Vacuworx lifters you already have working for you and ensures you are up to date with the latest product improvements. Here's how we deliver like-new performance for a fraction of the cost of a comparable new machine:

INSPECTION/EVALUATION

We perform a detailed 120-point inspection to develop a customized rebuild plan and cost estimate.

DISASSEMBLY

Your machine is disassembled. All seals, gaskets, bearings, wiring, switches, gauges and other components are inspected and measured against strict quality standards. Parts that are not consistent with factory standards are replaced with new parts.

RECONDITIONING

Beams are examined and, if necessary, straightened, welded and reinforced. Worn linkage pins and shaft bearings are replaced.

ENGINEERING UPDATES

Improvements introduced after the original date of manufacture are incorporated.

POWER TRAIN TESTS

The engine, fuel system, rotator and adapter are inspected, reconditioned and updated with new or qualified parts. Each component is thoroughly bench tested before reinstallation.

REASSEMBLY

All critical torques, clearances and pressure settings are maintained and recorded during reassembly.

PAINT AND DECALS

Your machine is repainted. New model identity graphics are applied along with a Vacuworx Factory Certified Machine Rebuild decal.

1-YEAR WARRANTY

If you authorize the complete rebuild plan presented, Vacuworx will issue a 1-year limited warranty against defects in materials and workmanship from the date of the Certified Rebuild.
