

TOUGH SEAL

Vacuworx has engineered a pad seal formulated to withstand rugged jobsite conditions and extreme temperatures. Tough Seal™ protects materials with no metal contact and secures proper vacuum even on dirty and somewhat uneven surfaces. The patent pending one-piece molded compound has improved tear strength and resists abrasions for 2 to 3 times longer performance life compared to alternative pad technologies. New HLOK Tough Seal features a unique design that “locks” into the channel and allows easy verification of proper installation.

- Enhanced UV protection reduces damaging effects of sunlight
- 360° seamless outer skin resists abrasions and repels destructive oils and moisture
- Increased seal memory performs better under a variety of rigorous conditions
- Engineered to perform at temperatures up to 215°F and as low as -40°F
- Chemically and mechanically stronger for safer lifting on the job

FILTERS AND KITS

All filters are not created equal. Don't run the risk of damaging expensive major components of your Vacuworx vacuum lifter by using “will fit” filters to perform important preventative maintenance service. Vacuworx OEM-approved filters are engineered and built to our exacting specifications to protect your investment.

FACTORY CERTIFIED MACHINE REBUILD PROGRAM

The Factory Certified Machine Rebuild Program extends the life of the Vacuworx lifters you already have working for you and ensures you are up to date with the latest product improvements.

FIELD INSPECTION PROGRAM

When you need to be sure your Vacuworx lifting system is operating properly, our Vacuworx Authorized Field Service Technicians are available to do a detailed inspection on-site wherever the lifter is located.
